Note: This book has been released under the Apache 2.0 open source license. Continue exploring. [Cancer in childhood]. The medical literature documents an increasing incidence of cancer during childhood. This is due to better survival rates and therefore cancer in children now accounts for a greater proportion of childhood cancers than it had in the past. Half of all childhood cancers are leukaemias, germ cell tumours, neuroblastomas and rhabdomyosarcomas, respectively. The treatment and prognosis are based on the child's age and stage of disease. Chemotherapy, surgery and radiotherapy still constitute an important basis in the treatment of childhood cancer. First Day of #RecycleABaby Miami! First Day of #RecycleABaby Miami! We are so excited to get this event started! This social media event will last for 30 days. Please follow along and share with your friends and family. Here's how you can be part of this event. Each day we are featuring a different social media page that is going to work on a "zero waste" goal throughout the month of March. Be sure to check them out and follow and share with your friends and family, as well as us. We are making it easy for you to #RecycleABaby and to be part of this very important movement! As part of our #RecycleABaby event, we will be trying to collect as much as we can for Zero Waste, so that we can educate those around us that we can all make the change and improve our way
