The Photoshop tutorials on the market are a great way to get started with the program. You can find a list in Chapter 12. Brush and Image Gizmos Photoshop allows the user to control brush types (pencil, airbrush, and so on) that can vary in speed, size, color, opacity, and other features. Brush controls are tied to image layers and are completely separate from the layers that contain the image. You can use Photoshop's image gizmos (including the Pen tool) to draw or paint in the image. You can then duplicate, move, or resize the image and even alter it on an individual layer. You can also copy or paste images (such as jpegs or Photoshop files) or bitmapped images into your projects and manipulate those images. Painting with the Brush You can paint colors directly onto a layer and apply brush settings using the Pen tool (or any other image gizmo). The Pen tool works by selecting a spot in a layer and directly painting on that layer, which you then erase with a white or black brush stroke. You can also use the Pen tool to stroke the image itself and create a painted texture effect. The brush controls listed in the following sections are available to you when the Pen tool is active in Photoshop. All brush controls function in a similar manner: You can adjust brush size, shape, transparency, and color from the interface shown in Figure 4-3. Figure 4-3: Paint on a layer with a brush and erase it with a black or white stroke. Exercise 4.1: Paint with the Pen Tool You can use the Pen tool to create many different effects in Photoshop. In this exercise, we'll use a simple Pen tool stroke to create a raised edge along one of the lines on an image. 1. 1. Select the Pen tool from the toolbar. Choose Edit→Stroke Path to open a Paths palette, as shown on the left in Figure 4-4. Make sure the Stroke Path option is selected in the control bar. 2. 2. Draw a thin line across the entire image and then select the Line tool (found in the toolbar) to create a thin, horizontal line. 3. 3. With your Line tool selected, choose Edit→Select All and then Edit→Path→Close Path.
